

## Economics of Hydro Power

By Bharat Jhunjhunwala

2009. Hardcover. Book Condition: New. 306 This book challenges the view that Run- of-River hydropower dams are green, clean and renewable. It establishes that long term economic costs of hydropower are much larger than benefits through meticulous assessment of impacts. Also challenged is the perception that our needs for power are vast. It is shown that Ministry of Power and Planning Commission have greatly exaggerated our requirements. In the result we may be destroying our rivers in the long run for a non-existent demand. The book also presents surveys of three hydropower dams in Uttarakhand which indicate that the long terms costs described in the book are supported by people's perception. This book is essential reading for economists, power sector officials, power generation companies and environmentalists alike. About The Author:- Bharat Jhunjhunwala was born in a family having interest in sugar, paper and electronic industries. He acquired his doctoral degree in Food and Resource Economics from University of Florida at the age of 23. He joined Indian Institute of Management, Banagalore as an Assistant Professor.
