Reviews

Definitely one of the better publication I have got possibly read. It really is writter in basic phrases and not difficult to understand. You wont sense monotony at anytime of your respective time (that's what catalogs are for about if you request me).

By what means are the bodies of fish secured from the macerating influence of the water? A. Besides a strong scaly covering with which many species are furnished, they are protected from the influence of the waters by a glutinous matter, which is an effectual preservative against the ill effects which might otherwise arise from the element in which they dwell. Q. Do fish possess the external senses in perfection? A. It is impossible to answer this question with certainty; but it is probable that their scaly covering renders their sense of touching very imperfect; that from their hard bony palate, they can have but little delicacy of taste; the density of the fluid in which they live must render their sense of smelling not very acute; and it is very doubtful whether they hear at all. Q. Is not their sight very quick? A. Their sight is supposed to be quick, but, from the structure of the eye, there is reason to believe that their powers of vision do not enable them to discern objects at a considerable distance.
